MAP INTRODUCTION

The purpose of this map is to help boaters and the general public conveniently find environmental services within the central and southern areas of the Sacramento and San Joaquin Delta (Delta). These services are an important means of preventing pollution at its source to preserve and protect the Delta's water quality, so that everyone can continue to enjoy it for many generations. comprehensive map including all the marinas in the Delta. Some marinas are excluded due to lack of information, a request for anonymity, having a boat capacity of less than ten slips, or not being open to the general public.

The Delta, A Precious Resource

The Delta ecological system is the largest estuary on the Pacific Coast of the United States and is a critical center for many beneficial uses, both locally and for people throughout the state. The Delta is the physical hub of California's two largest water distribution systems, supplying drinking water to two-thirds of the state's population, irrigation water for over 7 million acres of farmland and supporting many recreational activities. The most popular recreational activities in the Delta are boating, fishing, leisure cruising, wake boarding, skiing, swimming and bird watching. The Delta is also home to hundreds of different wildlife species and is a part of the Pacific Flyway, providing critical habitat for thousands of migratory birds.

The population of the six counties adjoining the Delta (Alameda, Contra Costa, Sacramento, San Joaquin, Solano and Yolo) is expected to continue to increase over the coming years, with growing suburban development. Thus, the number of boaters recreating in the Delta is also expected to increase well beyond the Delta Counties' current level of 170,400 registered boaters.

To preserve the Delta's precious resources while accommodating its growing popularity with recreators, local marina operators and caring boaters are working with the Contra Costa County Public Works Department, Sacramento County Environmental Management Department, San Joaquin County Department of Public Works, Solano and Yolo Counties, City of Stockton, California Coastal Commission and Department of Boating and Waterways to implement a marina and recreational boating program called "Keep the Delta Clean" (funded by the State Water Resources Control Board). The program uses education and pollution prevention services to preserve and protect water quality, opportunities for recreational activities and environmental health in the Delta. Please read below to learn more about how you can help keep the Delta safe and clean for all.

OTHER MAP RESOURCES

Below are other navigation and map resources you can use to learn more about Delta underwater topography, fishing locations, recreational facilities, Delta history, ferry details and annual events.

NOAA Navigational Charts

18652 SC, San Francisco Bay to Antioch
18659, Mallard Island to Antioch
18661 SC, San Joaquin River (lower Sacramento River)
18662 SC, Sacramento (Andrus Island to Sacramento)
18664, Sacramento River (Sacramento to Colusa)

BOAT CLEANING & MAINTENANCE

The products you purchase to clean and maintain your boat can be harmful to aquatic life, water quality and human health. When you purchase boat cleaning products, check the labels for words such as "danger," "poison," "warning," or "caution" that indicate the toxicity of a product.

TOPSIDE

Use Less Toxic or Non-Toxic Cleaning Products

- Use non-phosphate, biodegradable cleaners.
- Use more elbow grease and fewer cleaning products; scrub and rinse with freshwater after each trip.
- Use canvas boat covers to keep your boat clean between trips and to reduce the amount of cleaning you need to do.

Spill-Proof Cleaning and Maintenance Activities

- Contain debris using tarps and then use a vacuum or broom to collect it.
- Avoid doing boat maintenance on the docks or over the water.
- Always mix paints, varnish, epoxy and other products over a tarp or in a drip pan to catch spills and drips. Keep absorbents nearby to wipe up spills.

BOTTOMSIDE

- Choose less toxic hull paints and anti-fouling strategies that include environmentally sound underwater hull cleaning practices.
- Combine the use of less toxic paints and bottom coatings with mechanical means (manual or power scrubbing) to control growth. Less toxic bottom coatings provide alternatives to soft sloughing paints that release heavy metals.
- Talk to your boatyard operator or marine supply shop staff about less toxic alternatives.
- Take unused boat maintenance products (bottom paints, cleaning solvents and zinc anodes) back to shore and recycle or dispose properly at a Household Hazardous Waste Collection Center. (Household Hazardous Waste Disposal locations are listed at the upper-right corner of this side of the map.)

OIL AND FUEL

Oil, fuel and other petroleum products are considered to be toxic to human health and aquatic life. Help prevent pollutants from entering the Delta by practicing preventive engine maintenance and by using oil absorbents.

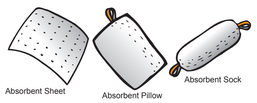
Look on the opposite side of this map to find marinas with oil absorbent exchange programs ⚓ and certified used oil collection centers 💧. Read below for more information on the oil absorbent exchange program.

Oil Absorbents

Use oil absorbents in the bilge to capture small leaks and drips from your engine. The absorbents will capture oil before the bilge pump discharges it into the water.

What is an Oil Absorbent?
Oil absorbents come in many shapes and sizes, such as sheets or pads, pillows and socks. They absorb oil while repelling water. Oil absorbents are the least expensive method that boaters can use to control oily discharge and soak up small oil spills. (It is illegal to use soaps or bilge cleaning products to dissipate an oil sheen on the water. Soaps, detergents and emulsifiers add more pollutants to the environment without removing the oil from the water.)

Oil Absorbent Sheets: Use flat absorbent sheets for oil drips under the engine and in the bilge and to remove oil sheen on the water. Pads can also be used while fueling your boat or when filling a portable fuel bottle to catch fuel spills at the filler fitting and air vent.



Absorbent Socks or Pillows in the Bilge: Socks and pillows are designed for use in deeper bilge compartments. Properly secure absorbents in the bilge. If you have an extremely oily bilge, consider using a bilge pumpout service and then a steam cleaning service that properly disposes of the wastewater.

PRECAUTIONS: When using absorbents in the bilge, secure them to prevent clogging or fouling the bilge pump and the bilge pump float or sensor. Oil and fuel are flammable. Keep oil and fuel saturated absorbents in a well-ventilated area, away from heat and sources of ignition.

Where Can I Get an Oil Absorbent?
Absorbents are sold at marine supply stores and come in a variety of shapes and sizes, such as flat sheets, pillows, socks, booms and spaghettis.

Where Do I Dispose of Used Oil Absorbents?
In California, absorbents saturated with oil are hazardous waste and should not be thrown in the garbage. You have various options for properly disposing of your saturated absorbents:

1. **Oil Absorbent Exchange Centers:** This service is offered by marinas that are actively distributing and collecting oil absorbents for free as a way of reducing oil discharges from boats. (Marinas distributing and collecting oil absorbents on an emergency basis are not considered to be participants in an Oil Absorbent Exchange Program.)

   Use this map to find marinas accepting saturated absorbents. Look for the ⚓ on the map.

2. Ask your marina operator about local resources to properly dispose of saturated absorbents.

3. Call (800) CLEANUP (253-2687), or visit www.earth911.org to find hazardous waste disposal locations near you.

Preventive Engine Maintenance

- Practice preventive engine maintenance. Keep the engine well tuned and operating efficiently.
- Choose Coast Guard-approved alcohol-resistant fuel lines.
- Avoid using solvents or toxic chemicals to clean engine parts. Use mechanical means (such as hand-scraping caked oil) or less toxic solvents (water-based). Do not let solvents run into the bilge.
- Transfer and remove fluids with care using funnels, pumps and absorbents to eliminate drips and spills. Do not let fluids and solvents run into the bilge.
- Use oil/fuel-only absorbents in the bilge to capture unexpected leaks.

Report Oil and Chemical Spills

- Report spills of oil or chemicals to the National Response Center - (800) 424-8802, California Office of Emergency Services - (800) OILS911 (645-7911) and to the marina office.

Spill-Proof Your Oil Changes and Recycle Used Oil

- If you change your own oil, use a closed system – a portable vacuum oil change pump that drains into a container that is closed to prevent spills during transfer of oil (available at most marine supply stores).
- Do not mix used oil with other waste. Keep it separated for recycling.
- Recycle used motor oil and oil filters at a certified used oil collection center or marina providing this service. See 💧 on the map for locations near you.

Use Safe, Spill-Proof Fueling Practices

- Prevent fires while fueling by shutting off motors, lights and electrical equipment. Extinguish cigarettes and any other sources of ignition. Keep fuel-soaked absorbents away from sources of ignition. Close doors, hatches, ports and entryways and turn off blowers.
- Maintain nozzle contact with the fill pipe to prevent static sparks and spills.
- Fill tanks slowly to prevent overflows from the air vent. Avoid "topping off" the tank. Automatic shut-off nozzles do not shut off in time to prevent spills.
- Know the capacity of your tank and leave it at least 10 percent empty, because fuel expands.
- Use an absorbent fuel bib or hold an absorbent sheet under the nozzle to catch drips. Properly dispose of fuel-soaked bibs and absorbents as hazardous waste.

Report oil, fuel and chemical spills to all numbers below:
(800) 424-8802 – National Response Center
(800) OILS911 (645-7911) – CalEMA

HAZARDOUS WASTES

Boaters use many products to clean and maintain their boats. Many cleaning and maintenance products are considered hazardous waste, including antifreeze, lead-acid batteries, used oil and oil filters, oil/fuel saturated absorbents, solvents, paints, zincs, varnishes and cleaning products. The use of these products can sometimes result in spills and leftover products that require disposal. Hazardous wastes are toxic to human health and aquatic life and should be disposed of at a Household Hazardous Waste Facility.

Use this map and listed resources to find locations where you can conveniently and safely dispose of hazardous wastes.

- At home, other common household products (such as cleaners, paints, car products and pesticides) may also be hazardous. To determine whether a product is hazardous, check the label for words such as "danger," "warning," "caution," "poisonous" and "flammable."
- Check stored products every six months and properly dispose of those that are old or unnecessary.
- Look for ⚓ 💧 and see the Marinas and Environmental Services chart on this map for places to properly dispose of used oil absorbents, used motor oil and filters, and marine batteries.
- See the Household Hazardous Waste Collection Facilities box on the upper-right side of the map for disposing of materials listed above and other hazardous materials not accepted by marinas or Certified Used Oil Collection Centers. Many facilities offer FREE drop-off for residents in their service area. Call to confirm availability of services and hours of operation.
- Contact your local garbage/recycling company. Some areas have curbside used oil and filter collection services and special drop-off events.
- Call (800) CLEANUP (253-2687) or visit www.earth911.org for more information and to find other hazardous waste disposal options in your area.

GRAY WATER

Soaps from boat washing, sinks and showers are more harmful than those at home because they are not treated in a sanitary sewer system.

- Do as much cleaning at shoreside facilities as possible.
- Choose phosphate-free, biodegradable soaps.

BOAT SEWAGE

Over one hundred different intestinal pathogens such as viruses, parasites and bacteria can be found in sewage that may harm humans, wildlife and drinking water quality.

Look for 🚻 on the map for marinas with sewage pumpout facilities or visit www.dbw.ca.gov/Pumpouts

- It is illegal to discharge any sewage, treated or untreated, into the Sacramento-San Joaquin Delta (East of Chipps Island) as stated in the Clean Water Act. The entire Delta is considered a rivers system that does not support interstate traffic [CFR § 33 and 40].
- Always use shoreside restrooms when docked and before casting off.
- Visit a marina with a sewage pumpout and/or port-a-potty dump station to properly dispose of sewage. For assistance in properly operating a sewage pumpout, contact the marina operator or staff. See 🚻 on the map for locations near you.
- All boats with installed toilets must have a Coast Guard-approved Marine Sanitation Device (MSD) if operating in U.S. navigational waters.
- Avoid holding tank disinfectants and deodorizers that contain chlorine, quaternary ammonia, formaldehyde or other chemicals that can be harmful to aquatic organisms.
- If you have a Y-valve with a through-hull fitting that allows direct overboard discharge, it must be secured in the closed position (using a padlock or non-releasable wire tie).

TRASH AND MARINE DEBRIS

Trash, fishing gear and debris in the water, and on levees and beaches has detrimental effects on wildlife, boater safety, and on the quality of recreation in the Delta.

- Bring it all back. Designate a permanent on-board trash bin. Properly stash all containers and trash on board to prevent items from being blown overboard.
- Put empty cans and bottles back in your cooler to recycle on-shore.
- Remove product packaging at home or pack food from home in a reusable container to eliminate packaging waste on board. REMEMBER! **Reduce, Reuse and Recycle.**
- Take used monofilament fishing line back to recycling bins at your marina or tackle shop, or send it directly to: Pure Fishing, 1900 18th Street, Spirit Lake, IA 51360-1099, (800) 237-5539.
- Participate in a local marina or beach cleanup– call (800) COAST4U (253-2687), or visit the California Coastal Commission Website at: www.coast4u.org.

NON-NATIVE AQUATIC SPECIES

Non-native aquatic plant and animal species are invading the Delta, clogging up channels, impacting recreation and displacing native species. Native Delta species must compete for habitat, often are prey to invaders and can be infected with foreign diseases. Once non-native species are introduced, they are nearly impossible to eliminate. Non-native species can be accidentally introduced by recreational boaters when caught on propellers, in intakes and attached to hulls. Unused live bait dumped into the water can also introduce invaders. To avoid the introduction of these non-native aquatic species in the Delta, boaters are being asked to "Clean, Drain and Dry" their boats. Specifically:

- Drain livewells, bilge water and transom wells before leaving the area where you used your boat.
- Flush water through your boat motor's cooling system and other parts of the boat that normally get wet. If possible, let everything dry for five days in the hot sun before using your boat in another body of water.
- After leaving the water, inspect your boat and boat accessories, and dispose of any residues you find by placing them in the garbage bin. Wash your boat, tackle, downriggers and trailer with hot water.
- Empty bait buckets on land, never into the water. Never dip your bait or minnow bucket into a lake if it contains water from another lake. Never dump live fish or other organisms from one body of water into another one.

Report sightings of invasive species toll-free to:
(877) STOP ANS (786-7267)

CARBON MONOXIDE

Carbon monoxide is a colorless, odorless and tasteless gas that, in high concentrations, can be fatal. Carbon monoxide is a by-product of combustion of carbon-based material such as gasoline, natural gas, propane, coal or wood. Common sources of carbon monoxide aboard boats are the main or auxiliary engines, generators, cooking ranges, space heaters and water heaters.

Carbon monoxide can collect aboard boats in a variety of ways:

- Exhaust leaks
- Improperly vented appliances
- Entry of exhaust into enclosed areas, most commonly due to mooring too close to a dock or another boat that obstructs the exhaust port
- Entry into cabin compartments by prevailing wind conditions or back drafts

The California State Parks Division of Boating and Waterways warns all boaters that carbon monoxide poisoning is an extremely dangerous matter that can result in serious injury or death. DBW also advises all boaters to ensure that exhaust systems are maintained, appliances and accommodation spaces are vented, swimming areas are monitored and carbon monoxide detectors are installed in accommodation spaces. It is unlawful for boaters to ride on the swim platform or to participate in "teak surfing" or "platform dragging."

FIRST AID

It is recommended that every boater take an American Red Cross or other approved first aid course. It is important to know what to do in the event of an emergency or injury for your own safety and the safety of your passengers and other boaters who are enjoying the Delta. To learn about the first aid courses offered by the American Red Cross, please contact:

American Red Cross Sierra-Delta Chapter
(916) 993-7070 or visit www.redcross.org/ca/sacramento

Equip your boat with a first aid kit that contains, at a **minimum**, the following first aid supplies:

- Adhesive bandages in various sizes
- Rolled bandages (1 and 3 inches)
- Fingertip bandages
- Triangular bandages
- Sterile pads
- Antiseptic
- Medical adhesive tape
- Scissors and tweezers
- Gloves
- Germicidal hand wipes
- Butterfly closures
- Eyewash cup
- Sterile eye pad
- Cold compress
- First aid guide
- Calamine lotion
- Aspirin or non-aspirin pain relievers
- Motion sickness medication or patches
- Antibiotic ointment

SAFER FISH CONSUMPTION

Eating fish is good for your health, but some fish caught in the Delta, including striped bass, contain high levels of mercury. Mercury can negatively affect how the brain develops in unborn babies and children. Therefore, **women 18-45, especially those who are pregnant, and children 1-17 should limit their consumption of high mercury fish.**

Striped Bass

For detailed advice on more Delta fish for consumers of all ages, go to www.oehha.ca.gov/fish/so_cal/index.html or call (916) 327-7319 (Sacramento) or (510) 622-3170 (Oakland). **Safer fish from the Delta include salmon, trout, and American shad.** These fish are both low in mercury and high in healthy "omega-3 fatty acids."

American Shad

Salmon

Trout

BOATING SAFETY

Educate Yourself About Safe Boating

To learn more about California's boating laws, the new California Boater Card and/or general boating safety visit www.BoatCalifornia.com or call (888) 326-2822.

Water Skiing Safety

- When using a boat to tow a person on water skis or an aquaplane (such as a wake board, knee board or inner tube), there must be, in addition to the operator, one other person in the boat who can observe the person being towed. The observer must be at least 12 years of age.
- Any person being towed behind a vessel must wear a Coast Guard-approved Type I, II, III or V life jacket. (Check the label on the inside of the life jacket for approved activities.) See the life jacket section in this map for examples.
- Towing water-skiers after sunset or before sunrise is prohibited by state law.
- Water skis and aquaplanes must not be operated in a manner which endangers the safety of persons or property.
- Water Ski Flag: It is mandatory for the operator of a vessel involved in towing a skier to display a red or orange water ski flag (a square or rectangle, at least 12 inches on each side), to indicate:
  - A downed skier
  - A skier in the water preparing to ski
  - A ski line extended from the vessel
  - A ski in the water in the vicinity of the vessel

LIFE JACKETS

Children under the age of 13 are now required to wear a life jacket.

Off-Shore Life Jacket (Type I)
Best in open, rough or remote water where rescue may be slow. Type I's float your best, turn most unconscious wearers face up in the water and are highly visible.

Near-Shore Buoyant Vest (Type II)
Good in calm, inland water, or where there is a good chance of fast rescue. Less bulk. Type II's will turn many, but not all, unconscious wearers face up in the water, but Type II's are not suitable for long hours in rough water.

Flotation Aid (Type III)
Good in calm, inland water, or where there is a good chance of fast rescue. Generally the most comfortable life jackets. Type III's are not good for use in rough water and the wearer may have to tilt their head back to avoid face-down position in water.
Recommended for water skiing.

Throwable Device (Type IV)
Use in calm, inland water with heavy boat traffic where help is always nearby. Type IV's do not help unconscious persons, and are not designed for non-swimmers or children. Type IV's are not suitable for many hours in rough water.
***NOT* approved for water skiing.**
Required to be immediately available on all vessels 16 ft. and over.

Pull handle to inflate

Special Use Device (Type V)
High flotation when inflated. Good for continuous wear. However, may not adequately float some wearers unless this life jackets is partially inflated. Type V's must be used according to approved conditions listed on the label.
Type V's should not be worn during high speed activities unless tested for those conditions.
Not all Type V life jackets are inflatable.

Accidents happen too fast to reach for a life jacket. Remember to always wear one. Visit www.BoatCalifornia.com to find out how to select a life jacket.

5 M.P.H. ZONES

Limit your speed to 5 M.P.H. when your motorized vessel is:

- 100 feet from a bather (but not a water skier)
- 200 feet from a bathing beach, swimming float, diving platform, passenger landing being used, or a landing where boats are tied up
- Anytime you see a sheriff's emergency blue lights

Note: All vessels must stop at an accident and render assistance if emergency assistance has not yet arrived.

Help Keep the Delta Clean, Become a

DOCKWALKER

What are DOCKWALKERS?
Dockwalkers are volunteers who train boaters and other recreators about environmentally sound boating practices. Dockwalkers distribute educational materials while visiting marinas, boat launch ramps, boat shows and events.

How Do I Become a Delta DOCKWALKER?
Contact the Boating Clean and Green Program at (415) 904-6905 or visit www.BoatingCleanAndGreen.com (click on Dockwalker Program) to register for a FREE training. (Program sponsored by DBW and California Coastal Commission.)

COMMUNICATIONS

VHF Marine Radio Information

For emergency and distress use **channel 16**. The Coast Guard and local law enforcement monitor this channel. The following channels are used in the Bay and Delta area. For a more detailed list of VHF marine radio frequencies visit the Lauritzen Yacht Harbor website at www.lauritzens.com or call (925) 757-1916.

Radio Channels

06A - Coast Guard - inter-ship safety

07A - Some harbors/commercial

09A - Bridges - *This is the PRIMARY channel for all bridges in the Delta*

13A - Locks - The Montezuma Lock monitors this channel

16A - Hailing and distress-calling channel. Call other vessels on this channel, then move to a proper working channel

22A - Coast Guard - Liaison

68A, 69A, 71A, 72A, 78A - These are the proper channels to use for vessel-to-vessel communications

27, 28 & 86 - Stockton Marine Operator - upriver from Pittsburg

26, 84 & 87 - San Francisco Marine Operator - downriver/Suisun from Martinez to San Francisco Bay and beyond.

Whenever you hear the Coast Guard or other agency specify a channel like **78A** (alpha), they're indicating the United States channels as opposed to the International channels. It is important to know the difference, as the two are not the same. Most newer radios have both the international and U.S. channels, so pay attention to your radio settings.

Source for the above chart and information:
www.lauritzens.com/underway/UnderWay.asp

For special assistance with information on GPS, DGPS Loran-C and navigation rules, call the National Information Service Watchstander: U.S. Coast Guard (703) 313-5900.

Drawbridge Phone Numbers & Schedules

All the drawbridges in the Delta monitor marine VHF radio **channel 9**.
If you are uncertain about clearances or hours of operation, you can call the Rio Vista Bridge at (707) 374-2134. They can also make arrangements for after-hour openings for all the drawbridges in the Delta. Special arrangements usually need to be made at least 24 hours ahead of schedule. For more information on Delta bridges visit http://www.lauritzens.com/underway/UnderWay.shtml#Drawbridge or call (925) 757-1916.

Drawbridges in the Delta also respond to sound (horn) signals. One prolonged blast (4 - 6 seconds) followed by one short blast (1 second) sounded within reasonable hearing distance of the bridge. The drawtender will respond in kind, unless the draw cannot be opened, in which case, 5 short blasts will be sounded (Lauritzen's Yacht Harbor's website, 2010).

Download the Free Pumpout Nav App from your Android or Apple device and find the closest sewage pumpout station to your location

Mobile Boat-to-Boat Services

Mobile boat-to-boat services for bilge and sewage pumpout, steam cleaning and oil change provide an alternative to bilge sewage pumpouts and oil change services at fixed locations in marinas. There are numerous environmental benefits from these services when they are conducted appropriately, including using spill-proof oil extraction, soapless bilge cleaning, and proper waste management and disposal techniques. Where available, these services can be more convenient for boaters, since they may reduce the need to have boats hauled out for service, to bring boats to fixed facilities or to conduct their own maintenance and then transport the wastes to recycling or disposal facilities.

Currently, the Delta is only being served by mobile sewage pumpout services.

DELTA MOBILE SEWAGE PUMPOUT SERVICES ***(Fee Involved, call ahead for fee service)***

Marine Service Corps. (415) 370-6812 www.marineservicecorps.com Email: marineservicecorps@yahoo.com Areas served: Alameda (Oakland Estuary and Emeryville).
